STEEL STORAGE RACKING AUDITS

Our Independent Auditors Proactive Compliance are full service WHS Consultancy company taking a holistic approach to storage racking use and maintenance.

Proactive Compliance provide a racking inspection service to clients ranging from small business to leading multi-site organisations Across Australia.

Steel storage racking is subject to constant use resulting in damage and wear. Conducting regular inspections of your pallet racking installation is essential in ensuring a safe working environment. Australian Standards and Regulatory Authorities recommend that racking inspections are conducted at least annually by competent personnel. Our third party audits help you fulfil your duty of care to maintain a safe workplace.

Our experienced racking auditors conduct independent steel storage racking audits of all brands of racking. Proactive Compliance do not sell or repair racking and are not aligned with any manufacturer.

Our inspections are conducted in accordance with the Australian Standard AS 4084:2012 - Steel storage racking.

Proactive Compliance will provide Pallet Racking Sydney with a detailed report of the racking inspection outlining the recommended corrective actions. Pallet Racking Sydney will provide a quotation to repair or replace any faulty components as outlined in the report.

Proactive Compliance will assist you to develop an audit schedule and reporting system that will provide evidence to regulatory authorities that a programmed maintenance system is in place.

Proactive Compliance is a full service WHS Consultancy company taking a holistic approach to storage racking use and maintenance. We provide a racking inspection service to clients ranging from small businesses to leading multi-site organisations across Australia.

Our inspections include:

- Assessment of the application and use of the racking;
- Assessment of racking condition and plumb;
- Assessment of compliance with working load limits;
- Assessment of current configuration compared to the original configuration drawings where available.
- Inspection of uprights including damage and distortion;
- Inspection of beams for damage, distortion and weld condition;
- Inspection of braces for damage;
- Inspection of floor fixings for damage, corrosion and configuration;
- Assessment of pallet racking signage.
